

Trading Ford

Ten Thousand Years
of American History
in Piedmont
North Carolina

Rowan and Davidson Counties

Introduction

In October, 1929 the North Carolina Historical Commission and Citizens of Davidson County, N. C. erected the monument featured on the cover. The bronze plaque reads:

TRADING FORD
GENERAL NATHANAEL GREENE
IN HIS MASTERLY RETREAT FROM THE BRITISH ARMY
UNDER LORD CORNWALLIS, CROSSED THE YADKIN AT
TRADING FORD, ONE-HALF MILE SOUTHEAST OF THIS
SPOT, FEBRUARY 2-3, 1781. A SUDDEN RISE IN THE RIVER
PREVENTED THE PASSAGE OF THE BRITISH AND PERMITTED
THE AMERICAN ARMY TO ESCAPE AND PREPARE FOR THE
BATTLE OF GUILFORD COURT HOUSE

This monument is part of a 1.1 acre site which also includes a portion of the historic road bed over which Greene's army passed leaving the Trading Ford in February 1781. It was intended to have been a park, but instead was neglected and fell into disrepair. In many ways, it is symbolic of the entire Trading Ford area. In November 2009 the Churchland Lions Club and Trading Ford Historic District Preservation Association restored the Monument. We hope this will be the beginning of a positive future for this historic area.

The Trading Ford Historic Area

Within an area along a four-mile section of the Yadkin River, between present-day Salisbury and Lexington, North Carolina, and the lands adjacent to it, lies a concentration of historic features and sites reflecting over 400 years of habitation, colonization, transportation, and military use. Recovered artifacts indicate that Native Americans lived on this land ten thousand years ago. Archaeologists have only superficially looked for the evidences of their lives. One partial excavation, done in 1946 about four miles down-river, found evidence of a village of the Uwharrie Culture dating between 1300 and 1500 AD. In 1938 Joffre Lanning Coe excavated seven test squares in the area of the Sapona village described in 1701 by John Lawson and found "a major site." Other sites remain unfound or unexamined.

(Town Creek Indiana Mound, Coe)

Our earliest written record of the area comes from the diaries of the Spaniard Juan Pardo's expeditions in 1567 and 1568. He and his men, who may have been the first Europeans the Indians had ever seen, are thought to have visited the area twice, and built the largest of their forts there. Pedro Menendez de Aviles, governor of La Florida, the sprawling Spanish colonial territory, was so impressed with the descriptions of Guatari he intended to make it the site of his personal estate, a 5,500-square-mile domain promised him by the Crown. The fate of the men who stayed there is unknown, but the fort was short-lived. The Spaniards disappeared from the area, leaving the location of Fort Santiago a mystery that intrigues and eludes contemporary historians. The Guatari also disappeared, perhaps leaving a remembrance in the name of a series of bluffs along the river bank, the Heights of Gowerie.

(Cummings)

Following the Indian paths, explorer John Lederer visited the area in 1670, as did several other early explorers. John Needham is believed to have been murdered at the Trading Ford by his companion Indian John in 1667. The Indian path crossed the Yadkin River at the point early twentieth century local historian William Kizziah called "the old Trading Ford (before 1670)", noting the location as that used by Lederer. It was this prominent river crossing that led travelers through this area. In 1701 John Lawson visited the Trading Ford during

his "Journey of a Thousand Miles", describing the Sapona Indian village that was present at the time on the northern bank. Lawson's words paint a still recognizable picture of this ancient land:

"Nor could all Europe afford a pleasanter Stream, These Indians live in a clear field, about a mile square, which they would have sold me One side of the river is hemmed in with mountainy ground, the other side proving as rich a soil to the eye of a knowing person with us, as any this western world can afford."

Indian paths began a slow transformation into a trading path. The Trading Ford became part of the route used by Europeans who traded with the Indians. It stretched from near Fort Henry (Petersburg), Virginia, southwestward to the Catawba and Waxhaw Indian nations beyond present-day Charlotte, North Carolina.

As the eighteenth century progressed, European settlement reached the backcountry of North Carolina. The Jersey Settlement, north of the Trading Ford in present Davidson County, recorded several families there in 1745. By 1753, there were enough people living in the Yadkin valley to warrant the formation of Rowan County, which encompassed a far larger area than it does today. Six miles southwest of the Trading Ford, on the Trading Path, the town of Salisbury was granted a charter in 1755.

While the earlier "old Trading Ford" path (also called the Island Ford) over the Big Island in the Yadkin River continued in use, by 1755 colonists had established a new route just downriver from the island. Here the river could be forded on foot or horseback when waters were low. When the river was swollen, a ferry carried travelers safely across. Numerous fords and ferries were established along the Yadkin; however only the Trading Ford and the Shallow Ford, forty miles north, could accommodate heavily-loaded wagons. Traveling west in 1755, North Carolina's Governor Arthur Dobbs wrote of the Trading Ford:

"[The] Yadkin ... is a large, beautiful river where there is a ferry. It is nearly 300 yards over, it was at this time fordable, scarce coming to the horses' bellies. At six miles distant I arrived in Salisbury, the county seat of Rowan. The town is just laid out, the courthouse built, and seven or eight log houses erected."

The fledgling town of Salisbury grew rapidly as settlers traveled south from Pennsylvania on the "Great Road", which initially crossed the Yadkin River at the Shallow Ford, then passed through Salisbury. The roads continued to evolve. As a road was opened from the Moravian towns (Winston-Salem) south to cross the Yadkin in the Trading Ford area, later appellations of the "Great Road" came to be applied to that route.

By the fall of 1780 the American colonies were embroiled in the throes of birth as an independent nation, and the War for Independence had moved into North Carolina. With Lord Cornwallis' British Army in Charlotte and Colonel Patrick Ferguson ranging throughout the western North and South Carolina countryside threatening the populace, Piedmont North Carolina's peace and security were shattered. Many fled north to Virginia. Camped at the Yadkin Ford, about a mile upriver from the Trading Ford, U.S. General Jethro Sumner planned earthwork fortifications to defend the ford. Whether these planned fortifications were built remains to be determined, as does the location of the two camps in the area.

Nathanael Greene, by Charles Willson Peale (*Independence National Historical Park Collection*)

In February 1781 the war moved to the banks of the Yadkin. Nathanael Greene, General of the American Southern Army, was leading Cornwallis' British forces across North Carolina, away from their base of supply in Charleston, S. C. On February 2nd, Greene and General Daniel Morgan reached Salisbury, the military headquarters of the Salisbury District, which included most of western North Carolina. They began moving the supplies stored in Salisbury, their own troops, the prisoners taken at Cowpens, and fleeing civilians to and across the Trading Ford. For two days they ferried men and supplies across the river, with 1,800 men reaching the safety of the far shore. Left behind were 100 Virginia riflemen, a small party of N. C. cavalry, and a few wagons south of the Ford. The vanguard of the British army, under Banastre "Bloody" Tarleton and General Charles O'Hara, moved toward them just as dusk descended on February 3rd. The U.S. troops surprised and fired several rounds at the British, then abandoned their wagons and crossed the Yadkin two miles down. The Americans lost 2, while the British lost 10 or 12 killed and wounded. By the time the British reached the river, it was too high to ford, and all the boats were with the US army on the far shore.

The next morning Lord Cornwallis' main army, a total of 2,100, arrived at the Trading Ford. The artillery moved to the top of a nearby bluff and shelled the opposite bank, where Green, unruffled, tended to correspondence. Greene left the Yadkin that evening. Cornwallis, unable to pursue, stayed in Salisbury until the 6th, when he headed north toward the crossing at the Shallow Ford.

This event in the Revolutionary War was important more for what didn't happen than for what did. Greene had planned to reunite his forces in Salisbury and face Cornwallis there. However, the rapid pace of the pursuing British had foiled his plan. An engagement with less than his full complement could have been disastrous, especially if the Americans had been caught with their backs to the River, or with a force fragmented while the crossing was occurring. Greene's successful crossing of the Yadkin afforded him time to reach Virginia where he was able to resupply his men and face Cornwallis in the Battle of Guilford Courthouse the following month.

The Trading Ford basin didn't lack men of vision and ingenuity. In 1814 Rowan county petitioned the state for a bridge. Lewis Beard employed Ithiel Town, a native of Connecticut, to design and build a bridge upriver in 1818. This bridge greatly reduced the use of nearby fords and ferries. The Beard bridge is thought to have been the first bridge across the Yadkin. It rested on five stone pillars, and was of wood construction with a protective overhead cover. Town later patented the design and licensed its use throughout the nation. The Beard bridge soon connected Salisbury with the town of Lexington, founded in 1828. The bridge fell into disrepair after the Civil War, and foot, horse, and wagon traffic returned to the Trading Ford and other crossings along the river. However, as railroads became the newest transportation mode, the North Carolina Railroad (which ran between Charlotte and Goldsboro) built a bridge over the Yadkin in 1855.

Robert Knox Sneden's 1864 watercolor of a prison train heading to Salisbury (*Eye of the Storm*, Bryan & Lankford)

When the War between the States began, North Carolina was governed by John W. Ellis, born north of the Trading Ford on lands first purchased by his grandfather in 1758. Governor Ellis was not inclined to leave the union, but also could not with clear conscience send North Carolina troops to fight against the south. When this was demanded of him, he sided with those who favored secession. He died in office in 1861, and was buried in the family cemetery on the banks of the river where he had grown up. His body was later moved to the Old English Cemetery in Salisbury, but the graves of many of his immediate family still remain there, as does a footstone bearing his initials "J.W.E."

The defense of the railroad bridge prompted the building of Camp Yadkin (also called Fort York) on the northern bank of the Yadkin in 1864. This fort was a series of earthwork rifle trenches and artillery batteries on a high hill overlooking the river. On April 12, 1865, General George Stoneman's Union troops marched south from the Shallow Ford, dispersed Confederate forces at Grant's Creek, occupied Salisbury, and burned the Confederate prison. They marched to the Yadkin River, intent upon destroying the railroad bridge, and set up artillery positions on a hill on the southern bank. They fired across the river all afternoon, but the 1000-1200 men under General Zebulon York defending the Fort and the river passes prevailed, and the Union troops withdrew after dark, leaving the bridge undamaged. Three days after Lee surrendered at Appomattox, York's troops at Camp Yadkin won the last Confederate victory in North Carolina.

1899 Piedmont Toll Bridge

In 1899, upon the pillars of the original 1818 Beard Bridge, the Piedmont Toll Bridge was erected. It was used until 1922, when the "free bridge", the Wil-Cox Bridge (now carrying southbound US 29 traffic) was built by the state. The stone pillars which bore the early Beard and toll bridge spans still stand amid the yellowish-red waters of the Yadkin.

In the early 1900s, the Trading Ford, and nearby St. John's Mill (built before the Civil War, burned in 1913), were popular picnic sites and buggy ride destinations, informally filling the role of community cultural resources. However, in the 1920s, things began to change in the Trading Ford area. The free Wil-Cox Bridge ended the use of fords and ferries. High Rock dam was built downriver, sometimes flooding adjacent low lands near the Trading Ford. A power plant (now Duke Power) was built on the southern bank of the Trading Ford, industrializing that segment of the landscape and restricting public access. In 1979, the North Carolina Railroad built a hump yard on the northern bank, through the Native American lands described by John Lawson in 1701.

The Trading Ford area has become remote and, as a practical matter, almost inaccessible, except to those who live and work there and the fishermen who pass by. The vast majority of the landscape is rural or natural. Even much of the visual intrusion has not fundamentally altered the land. Most of the river's shoreline in this local area has escaped both residential and industrial development. There are natural waterways and wetlands, lowlands and bluffs, forests and rolling farmlands. The fords, ferries, ancient paths and roadways are incorporated unobtrusively into the landscape, and Camp Yadkin guards its pass unknown to the cars and trucks below it.

Preservation faces an uphill battle. Currently, the only land in the area which is protected is the peninsula on which the Ellis family cemetery lies, which was donated to NC Wildlife. While most school children learn about the Trading Ford and the Trading Path, published research is needed to raise public awareness of this area's history. Funding would make archaeological investigation possible. Organizational sponsorship of the area's preservation is just beginning. Public planning could work toward future preservation, and education could influence private landowners to establish conservation easements. And planning is needed for development of heritage tourism sites. Camp Yadkin/Fort York is perhaps the most obvious beginning, for while some of it was lost to early highway construction, most of what remains is in excellent condition, and cries out to be preserved, visited, remembered, and enjoyed. Some of the early roads, fords and ferries can also be preserved and restored. Reconstructing the 1818 Ithiel Town covered bridge would bring an exciting asset to the area. And perhaps in the future the Revolutionary War site can be reclaimed.

Trading Ford Area in Peril

The highly-significant Trading Ford area faces multiple possible threats from development, the failure of federal preservation laws, and weak state preservation laws, which could destroy key area in this highly significant historic area.

- Duke Energy's plans to build a new power plant threaten the historic Trading Ford itself and the heart of the Revolutionary War battlefield. An inadequate archaeology survey done in 2000 failed to recognize the proximity to the Trading Ford and the presence of the Revolutionary War site. Duke Energy conducted additional study, but side-stepped evaluating the impact on the Revolutionary War and Trading Ford sites. As the period for public comment closed, Duke Energy changed its previous representation that

Sunken roadbed near Trading Ford

the project was subject to federal preservation laws, claiming that it falls solely within the jurisdiction of NC's state preservation laws, which offer far less protection of historic sites. Duke Energy is more interested in getting clearance to proceed with the project than in preserving irreplaceable historic properties. Duke Energy has ignored alternatives to build the plant nearby, in a location which would do no damage to historic sites. The Trading Ford and other sites associated with the "Race to the Dan River" were given highest national significance in the National Park Service's 2008 report to Congress on the nation's Revolutionary War sites.

- Perhaps the most pervasive threat to the Trading Ford area is the proposed private development of the High Rock Raceway. This development would irrevocably destroy 200 acres of the heart of the Battle at the Yadkin River Bridge battlefield, the scene of the last Confederate victory in North Carolina. On April 12, 1865, Union and Confederate troops here waged a five-and-one-half hour artillery battle, focused on the railroad bridge over the river. The racetrack would also block access to the site of the 1818 covered bridge, and would impact a stream along which

Vandenberg volley gun captured at Salisbury, April 12, 1865

Revolutionary War armies camped in the fall of 1780. This site is the gateway to the Trading Ford historic area, and is essential to

development of the area as a heritage tourism destination. The Battle at the Yadkin River Bridge was among the Civil War Preservation Trust's 25 most endangered Civil War battlefields in 2008 and 2009.

- While the rest of NCDOT's I-85 improvement project plans to widen the interstate in its present location, at the sensitive Yadkin River, NCDOT plans to realign the highway, destroying part of the Trading Path; the Yadkin (John Long's / Cowan's / Hedrick's) Ferry; an additional corridor through the Yadkin River Bridge Civil War Battlefield; the 1951 Highway 29 bridge, determined eligible for the National Register of Historic Places; and possibly the 1922 open-spandrel concrete arch Wil-Cox bridge, also determined eligible for the National Register (should Davidson County fail in its commitment to preserve the bridge).

DOT truck parked on Civil War earthwork

Better planning could have widened the interstate while doing little damage to historic properties. Instead, NCDOT opposed the recognition of these historic sites, and obtained approval without resolving most National Register eligibility issues, without taking responsibility for preservation of National Register eligible resources, without doing any meaningful mitigation. The project has been delayed by unexpected statewide funding cutbacks, but destruction of historic resources appears to be certain.

It is the aggregate of these historic sites which gives the Trading Ford area its importance. These historic sites have existed for hundreds, if not thousands, of years. Let us not lose them at the dawn of a new century. It is our heritage. It cannot be replaced.

"Here is your country. Do not let anyone take it or its glory away from you. Do not let selfish men or greedy interests skin your country of its beauty, its riches, or its romance. The World and the Future and your very children shall judge you according to [the way] you deal with this Sacred Trust."

-- President Theodore Roosevelt
